SUMMARY

Work on reusable engine systems, plugins, networking and performance critical applications.

Experience in developing production quality frameworks and tools used in multiplayer, simulation and client-server projects. Strong background in UE5 C++, multithreading, backend communication, profiling and systems architecture.

EXPERIENCE

Unreal Engine C++ Engineer

New Journey Studio ↗

01/2024 - Present

Core and Gameplay Engineer for a large-scale UE5 MMO RPG.

- Designed reusable Unreal Engine C++ modules, plugins, and components intended for use across multiple gameplay systems
- Architected performance-critical UE5 systems supporting 10,000+ replicated AI entities and 1,000+ concurrent players at stable 60 FPS Designed and maintained a custom ECS framework for large-scale simulation
- Developed a custom TCP networking layer integrated with UE5 networking Built multithreaded gameplay systems using the UE Task Graph, including abilities and asynchronous physics queries
- Profiled and optimized CPU/network bottlenecks across gameplay and simulation systems

Game Developer - Part-time Contract

Vic Tec ↗

06/2025 - 08/2025

Independently designed and delivered a production UE5 naval training simulator in 90 days, from an empty project to deployed game.

- Implemented the simulation architecture, gameplay and physics entirely in C++
- Developed a custom 6-DOF vessel dynamics and buoyancy model using Chaos Physics
- Implemented sensor and weapons simulation systems
- Delivered and optimized the application for deployment on ruggedized hardware

Unreal Engine Gameplay Programmer

Coffee.io ↗

07/2022 - 06/2023

Full-stack multiplayer developer. Created production-ready experiences for Unreal Engine 4 game.

- Designed robust scalable TCP C# micro-services, and authoritative game servers that maintain synchronization for over a thousand concurrent players.
- Developed custom matchmaking and live-ops telemetry for third-person shooter.

SKILLS

Unreal Engine Stack

C++ / Blueprints / Engine / Gameplay Framework

Multiplayer / TCP / HTTP(s) / WebSocket /Protobuf

AI / Behaviour Tree / State Tree

GAS / MASS

Plugins / Engine Tools

Multithreading / Task Graph

Debugging, profiling, optimization

Git
